

**Strong IV Protection**  
for Severe Viral Infections....

# Aclonist-500

## Acyclovir 500gm Injection

- Used for the treatment of severe herpes simplex virus infections, including herpes encephalitis, mucocutaneous lesions, and cases where oral therapy is not effective or feasible.
- Indicated for managing varicella-zoster virus (VZV) infections, such as shingles and chickenpox, especially in immunocompromised patients who require rapid antiviral action to control viral replication.
- Given to prevent or treat viral flare-ups in patients with weakened immune systems, such as post-transplant patients or those undergoing chemotherapy, helping reduce complications and disease severity.
