

Arteslide-M

Tablets

Artesunate 100mg + Mefloquine 220mg

Artesunate provides **rapid parasite clearance** by inhibiting multiple stages of the malaria parasite.

Mefloquine ensures **sustained schizontocidal activity** for effective treatment and relapse prevention.

Combination therapy **enhances efficacy** and reduces the risk of drug resistance.

Effective against both chloroquine-sensitive and **chloroquine-resistant strains** of malaria.

Provides **fast symptom relief** and reduces parasite load quickly.

Well-tolerated and suitable for uncomplicated falciparum malaria.

Indications

Uncomplicated
Falciparum
Malaria

Chloroquine-
Resistant
Malaria

Acute Febrile
Illness due to
Malaria

Prevention of
Malaria in
Endemic Areas

Treatment for
Adolescents &
Adults
