

Carbicure 5 Tablet

Brand Name: Carbicure 5 Tablet

Dosage Form: Tablet

Composition:

- **Carbimazole (5 mg)**

Therapeutic Segment:

Antithyroid / Endocrine Segment

Therapeutic Indication:

Carbicure 5 Tablet is used in the **management of hyperthyroidism (overactive thyroid gland) and Graves' disease**. It helps in controlling the excessive production of thyroid hormones and restoring normal metabolic balance.

It helps in:

- Reducing symptoms such as **weight loss, nervousness, sweating, tremors, and palpitations** associated with hyperthyroidism.
- Preparing patients for **thyroid surgery or radioactive iodine therapy**.

Mechanism of Action:

- **Carbimazole** is converted in the body to **methimazole**, which **inhibits thyroid peroxidase enzyme**, thereby blocking the synthesis of thyroid hormones (T3 and T4).
- This helps in **reducing thyroid hormone levels** and **normalizing thyroid function**.

Dosage & Administration:

- Dose should be taken **as prescribed by a physician**, usually once or twice daily.
- Swallow with water, preferably **after meals**.

Contraindications:

- Hypersensitivity to **carbimazole or thionamides**
- Severe **hepatic impairment**
- **Pregnancy and lactation** (unless clearly indicated and monitored)

Warnings & Precautions:

- Regular monitoring of **thyroid function tests** is essential.
- Discontinue immediately if signs of **infection, sore throat, or fever** occur (possible agranulocytosis).
- Use cautiously in patients with **liver disorders**.

Possible Side Effects:

- Nausea, vomiting, or upset stomach
- Skin rash or itching
- Joint pain
- Rare: Agranulocytosis (serious blood disorder)

Storage:

Store in a **cool, dry place below 25°C**, away from direct sunlight and moisture.

Segment:

Antithyroid / Endocrine Segment – It helps in **controlling overactive thyroid function and maintaining hormonal balance.**
