

"Enhancing **Peripheral**
Blood Flow, Step by Step."

Cilostazol (50mg) Tablets

- Antiplatelet and vasodilator agent that improves blood flow in peripheral arteries.
- Reduces platelet aggregation and prevents thrombus formation.
- Inhibits phosphodiesterase III (PDE-III), increasing cAMP levels in platelets and vascular smooth muscle.
- Improves walking distance and exercise tolerance in patients with peripheral arterial disease.
- Helps relieve ischemic symptoms by enhancing peripheral circulation.
- Helps reduce symptoms of pain, numbness, and cramps in lower limbs caused by poor circulation.

Indications:

Intermittent claudication

Ischemic leg pain

Peripheral arterial disease (PAD)

Platelet aggregation-related vascular disorders
