

Relaxes the Smooth Muscles In
Bronchospasm Associated with COPD....

Critsal™ Inhaler CFC-Free

Levosalbutamol (50)mcg ipratropium(20)mcg Inhaler

Levosalbutamol

- It is a bronchodilator used to treat asthma and COPD.
- It relaxes airway muscles by stimulating beta-2 receptors for quick relief.
- Acts within 5 minutes and provides relief for 4–6 hours.
- Common side effects include tremors, palpitations, and headache.
- Administer via inhaler or nebulizer as prescribed, and store in a cool, dry place.

Ipratropium

- It is an anticholinergic bronchodilator used to treat COPD and asthma.
- It works by blocking muscarinic receptors, preventing airway constriction.
- Provides relief from wheezing, shortness of breath, and chest tightness.
- Common side effects include dry mouth, cough, and throat irritation.
- Administered via inhaler or nebulizer; effects last for 4–6 hours.
