

For acute  
inflammatory and  
allergic disorders

# Defziff<sup>TM</sup> 12

Deflazacort (12mg) **Tablets**

- Provides potent anti-inflammatory & immunosuppressive action with reduced side effects compared to other corticosteroids.
- Helps preserve muscle strength and function in Duchenne Muscular Dystrophy (DMD).
- Offers effective symptom relief in autoimmune & inflammatory disorders (arthritis, nephrotic syndrome, asthma, SLE, IBD, etc.).
- Associated with less weight gain, bone loss & glucose intolerance than traditional steroids (like prednisone).

Duchenne Muscular Dystrophy (DMD)

Rheumatoid Arthritis & Juvenile Arthritis

Bronchial Asthma & Allergic Disorders

Dermatological Disorders
