

Diziderm BN Cream

Diziderm BN Ointment

Dosage Form: Ointment

Composition:

Each gram contains:

Betamethasone Valerate I.P. equivalent to Betamethasone 0.1% w/w

Neomycin Sulphate I.P. equivalent to Neomycin 0.5% w/w

Description:

Diziderm BN Ointment is a combination topical formulation containing Betamethasone, a potent corticosteroid, and Neomycin, a broad-spectrum antibiotic. It is used in the management of inflammatory skin conditions associated with bacterial infections. The formulation helps reduce inflammation, redness, itching, and swelling while preventing or treating bacterial infections of the skin.

Indications:

Infected dermatitis

Eczema with secondary bacterial infection

Allergic skin conditions with infection

Inflammatory skin disorders with bacterial involvement

Dosage & Administration:

Dosage should be used as directed by the physician.

Apply a thin layer to the affected area once or twice daily or as prescribed.

Pharmacological Action:

Betamethasone is a corticosteroid that reduces inflammation, itching, and allergic reactions by inhibiting inflammatory mediators.

Neomycin is an aminoglycoside antibiotic that inhibits bacterial protein synthesis, thereby preventing the growth of bacteria on the skin.

The combination provides anti-inflammatory and antibacterial action for effective skin treatment.

Side Effects:

Skin irritation

Burning or itching sensation

Dryness

Prolonged use may cause skin thinning

Rare allergic reactions

Precautions & Warnings:

Use under medical supervision only.

Avoid prolonged use, especially on large skin areas.

Do not apply on open wounds or broken skin unless prescribed.

Use cautiously in children and avoid contact with eyes.

Drug Interactions:

No significant drug interactions reported with topical use.
Consult physician if using other topical medications.

Storage:

Store below 25°C in a cool and dry place.
Protect from light.
Keep out of reach of children.
