

INDICATIONS

Type 2 Diabetes Mellitus

Inadequate Glycemic Control
On Dual Therapy

Cardiovascular Risk Reduction

Adjunct to Diet and Exercise

Empower Diabetes Management Target,
Heart, and Kidneys With One smart
Combination.

EmplozinSM-10 Tablets

Empagliflozin-10mg-Sitagliptin-100mg-
Metformin-1000mg-Extended-Release-Tablet

- 💧 Promotes urinary glucose excretion via SGLT2 inhibition (Empagliflozin).
- 💧 Enhances insulin secretion and reduces glucagon via DPP-4 inhibition (Sitagliptin).
- 💧 Decreases hepatic glucose output and improves insulin sensitivity (Metformin ER).
- 💧 Offers triple-action glycemic control for improved HbA1c levels.
- 💧 Cardiometabolic benefit supports heart and kidney health in diabetic patients.

Triple action. One solution
