

Etastyle 125 Injection

Brand Name: Etastyle 125 Injection

Dosage Form: Injection

Composition:

Each ml contains:

- Ethamsylate BP 125 mg
-

Description:

Etastyle 125 Injection contains Ethamsylate, a haemostatic agent used to control and prevent abnormal bleeding. It works by improving platelet adhesiveness and strengthening capillary resistance, thereby reducing blood loss during surgical, traumatic, or medical bleeding conditions.

Indications:

Indicated for management of:

- Surgical bleeding
- Abnormal uterine bleeding
- Epistaxis (nosebleed)
- Haematuria
- Bleeding due to capillary fragility
- Perioperative haemorrhage control

It helps in preventing excessive blood loss and stabilizing bleeding episodes.

Dosage & Administration:

- Dosage should be administered as directed by the physician.
 - Given as intramuscular (IM) or intravenous (IV) injection.
 - Administer slowly when given IV.
-

Pharmacological Action:

Ethamsylate enhances haemostasis by:

- Increasing platelet adhesion and aggregation
 - Strengthening capillary walls
 - Reducing bleeding time without affecting clotting time or coagulation factors
-

Side Effects:

Some patients may experience:

- Headache
 - Nausea
 - Mild abdominal discomfort
 - Injection site irritation
-

Precautions & Warnings:

- Use cautiously in patients with thromboembolic disorders.
 - Not recommended in active bleeding due to anticoagulant therapy unless advised by a physician.
 - Use during pregnancy or breastfeeding only if prescribed.
-

Drug Interactions:

May interact with:

- Anticoagulants
 - Antiplatelet drugs (Aspirin, Clopidogrel)
-

Storage:

Store below 25°C in a cool, dry place.

Protect from light and freezing.

Keep out of reach of children.

Manufactured in India for:

Cafoli Lifecare Pvt. Ltd.

(An ISO 9001: 2015 Certified Co.)
