Description:

Ezetyale 10 Tablet contains Ezetimibe, a lipid-lowering agent used to reduce elevated cholesterol levels. It works by inhibiting the absorption of cholesterol from the small intestine, thereby lowering total cholesterol and low-density lipoprotein (LDL) levels in the blood. It is commonly used as an adjunct to diet and lifestyle modifications for effective cholesterol management and reduction of cardiovascular risk.

Indications:

Primary hypercholesterolemia
Mixed dyslipidemia
Adjunct therapy with statins for better cholesterol control
Prevention of cardiovascular complications associated with high cholesterol

Dosage & Administration:

Ezetimibe selectively inhibits the Niemann-Pick C1-Like 1 (NPC1L1) transporter in the intestinal brush border. This reduces the absorption of dietary and biliary cholesterol, leading to decreased cholesterol delivery to the liver and increased clearance of LDL cholesterol from the bloodstream.
