T a b l e t s

Cefpodoxime Proxetil I.P. 200mg + Ofloxacin I.P. 200mg Tablets

- The combination is effective against a wide range of bacterial infections due to the individual actions of Cefpodoxime Proxetil (a cephalosporin antibiotic) and Ofloxacin (a fluoroquinolone antibiotic).
- It is used in treating various respiratory tract infections, including bronchitis and pneumonia.
- This combination is frequently prescribed for UTIs, providing relief from symptoms and preventing complications.
- It helps in managing skin infections and soft tissue conditions caused by susceptible bacteria.
- It may be used for prophylactic purposes in surgeries or in patients with compromised immune systems to prevent infections.

Indication In

Upper and Lower Respiratory
Tract Infections

Urinary Tract Infections

Skin and Soft Tissue Infections

Acute Bacterial Exacerbation
of Chronic Bronchitis
