

Flunafeb PR

Flunarizine 10mg + Propranolol 40mg Tablet

Dual-Action Treatment for Migraine Prevention and Vascular Health

Composition (Per Tablet):

- **Flunarizine** – 10mg
- **Propranolol** – 40mg

Product Overview:

This combination tablet combines two **well-established medications** for the prevention of **migraines** and the management of **vascular conditions**. **Flunarizine**, a **calcium channel blocker**, helps prevent migraines by reducing the frequency and intensity of attacks, while **Propranolol**, a **beta-blocker**, works by stabilizing the vascular system, reducing blood pressure, and decreasing the frequency of migraines.

This combination therapy is highly effective in **preventing migraines**, especially when **vascular triggers** or **stress** are involved. It is ideal for patients who experience **frequent or severe migraine attacks**, as well as for those who need support with managing **high blood pressure or anxiety**.

Key Benefits:

- **Prevents and reduces the frequency of migraine attacks**
- **Relieves migraine-related symptoms** such as nausea and vomiting
- **Stabilizes blood vessels and lowers blood pressure**
- **Effective in treating vestibular migraine**, dizziness, and vertigo
- **Reduces stress and anxiety** by modulating sympathetic nervous activity
- **Well-tolerated** with minimal side effects

How It Works:

1. **Flunarizine (10mg):** A **calcium channel blocker** that reduces vascular spasm and regulates blood flow, preventing the dilation of blood vessels in the brain that can lead to migraines.
2. **Propranolol (40mg):** A **beta-blocker** that reduces the effects of stress hormones, stabilizes blood pressure, and decreases the frequency of migraine attacks by controlling vascular tone.

Indications:

- **Migraine prevention**
- **Vestibular migraine** (dizziness and balance disorders)
- **Hypertension** (as adjunctive therapy)
- **Anxiety and stress-related symptoms**
- **Prophylactic treatment for patients with frequent or severe migraines**

Dosage & Administration:

- **Adults:** Typically, one tablet (10mg Flunarizine + 40mg Propranolol) once daily or as prescribed by the doctor
- Take with or without food
- **Swallow whole with water**, do not chew or crush

Precautions & Warnings:

- Not recommended for patients with **asthma, bradycardia, heart block, or other severe heart conditions**
- Caution in patients with **hypotension (low blood pressure)** or **heart failure**
- May cause **drowsiness or dizziness**; avoid operating heavy machinery or driving until you know how the medication affects you
- **Gradual withdrawal** is advised, especially when discontinuing Propranolol, to avoid rebound effects
- Consult your doctor before use if you are pregnant or breastfeeding

- Monitor **liver and kidney function** regularly during treatment

Side Effects (Rare and Mild):

- Drowsiness or fatigue
- Dizziness or lightheadedness
- Low blood pressure (hypotension)
- Nausea or gastrointestinal discomfort
- Sleep disturbances or vivid dreams
- Cold extremities (fingers or toes)

Storage Instructions:

- Store in a **cool, dry place**, away from direct sunlight
- Keep out of reach of children
- Do not refrigerate or freeze

Why Choose This Product?

- **Dual-action treatment** for effective migraine prevention and vascular health
- **Proven combination of Flunarizine and Propranolol** for reducing migraine frequency
- **Helps manage vascular conditions** like high blood pressure and anxiety
- **Well-tolerated with minimal side effects** compared to other migraine treatments

For best results, **follow the prescribed dosage** and consult your doctor for personalized migraine and vascular management. If any unusual side effects occur, seek medical attention promptly.
