

Fluorise Ointment

Brand Name: Fluorise Ointment

Dosage Form: Eye Ointment

Composition:

Each gram contains:

- **Fluorometholone IP 0.1% w/w**
-

Description:

Fluorise Ointment contains **Fluorometholone**, a mild corticosteroid for ophthalmic use. It helps in **reducing inflammation, redness, and swelling in ocular conditions** while minimizing the risk of steroid-induced ocular side effects.

Indications:

Indicated for:

- Allergic conjunctivitis
- Postoperative ocular inflammation
- Other non-infectious inflammatory eye conditions

It helps in **relieving ocular discomfort, redness, and swelling associated with inflammation.**

Dosage & Administration:

Apply a thin ribbon into the conjunctival sac 2–3 times daily or as directed by the physician. Wash hands before application and avoid contact with the tip of the tube to the eye.

Pharmacological Action:

Fluorometholone suppresses the inflammatory response in the eye by inhibiting the release of inflammatory mediators and reducing immune-mediated tissue damage.

Side Effects:

Mild eye irritation, burning, or transient blurred vision may occur in some patients.

Warnings & Precautions:

- Avoid use in bacterial, viral, or fungal eye infections unless prescribed with appropriate

therapy.

- Prolonged use may increase intraocular pressure; monitor if treatment exceeds recommended duration.
- Discontinue if hypersensitivity or severe irritation occurs.

Drug Interactions:

Concurrent use with other ophthalmic medications should be as directed by the physician.

Storage:

Store below 25°C in a cool, dry place. Protect from light and moisture.
Keep out of reach of children.
