

The winning pair in Type II Diabetes

For improved
glycemic control

Gimtype™ M1/M2/M3/M4 Forte

**Glimepiride 1/2/3/4mg + Metformin (S.R.)
500mg/ 1000mg Bi-Layered Tablets**

INDICATIONS

Type 2 Diabetes Mellitus

DPP-4 inhibitors

Blood glucose fluctuation

Diabetic Ketoacidosis

Metformin: Metformin SR reduces a steady blood level of drug throughout the day.

- Decreases glucose production & intestinal absorption of glucose by increasing peripheral glucose uptake & utilization.
- Improves hepatic & peripheral tissue sensitivity to insulin.
- Supports direct cardiovascular effects.

GLIMEPIRIDE : Reduces blood glucose levels by correcting both defective insulin secretion & peripheral insulin resistance
