

Information For the Use of  
Hydroxypropylmethylcellulose (0.3% w/w) + sodium Perborate Monohydrate (0.028% w/w) Eye  
Ointment

# Hydroclue Eye Ointment

**Brand Name:** Hydroclue Eye Ointment

**Dosage Form:** Eye Ointment

**Composition:**

Each gram contains:

- Hydroxypropyl Methylcellulose IP 0.3% w/w
- Sodium Perborate Monohydrate IP 0.028% w/w
- Ophthalmic ointment base q.s.

---

**Description:**

Hydroclue Eye Ointment is a lubricating ophthalmic preparation containing Hydroxypropyl Methylcellulose, a tear substitute and ocular lubricant, along with Sodium Perborate Monohydrate as a preservative system. It is indicated for the symptomatic relief of dry eye conditions and ocular surface irritation resulting from inadequate tear production or environmental factors. It helps in maintaining ocular surface hydration, improving tear film stability, and providing prolonged lubrication and comfort.

---

**Indications:**

Indicated for the management of:

- Dry eye syndrome
- Tear film insufficiency
- Ocular surface irritation and discomfort
- Burning, grittiness, and foreign body sensation in the eyes
- Dryness associated with environmental exposure or prolonged visual tasks

It helps in providing long-lasting lubrication and protecting the ocular surface from dryness-related irritation.

---

**Dosage & Administration:**

Apply a small amount of ointment inside the lower conjunctival sac of the affected eye(s) as required or as directed by the physician.

Wash hands thoroughly before application.

Avoid touching the tube tip to the eye or any surface to prevent contamination.

Temporary blurred vision may occur immediately after application.

---

**Pharmacological Action:**

- Hydroxypropyl Methylcellulose acts as a viscoelastic lubricant that supplements the natural tear film and forms a protective coating over the ocular surface.
- Sodium Perborate Monohydrate serves as a preservative that breaks down into harmless components upon contact with the tear film, helping maintain product sterility.

Together, these actions help in maintaining ocular moisture and improving patient comfort.

---

**Side Effects:**

Common side effects include temporary blurred vision, mild eye irritation, burning sensation, stickiness, or transient discomfort after application.

Rarely, hypersensitivity reactions may occur.

---

**Precautions & Warnings:**

- For ophthalmic use only
- Do not use if the product appears contaminated or damaged
- Avoid touching the tube tip to the eye or surrounding surfaces
- Contact lenses should generally be removed before application
- Discontinue use and consult a physician if irritation persists or worsens

---

**Drug Interactions:**

No significant systemic drug interactions are expected due to minimal systemic absorption. When used with other ophthalmic preparations, administer eye drops first and apply the ointment last, allowing an appropriate interval between products.

---

**Storage:**

Store below 25°C in a cool, dry place.

Protect from light.

Do not freeze.

Keep the tube tightly closed after use.

Keep out of reach of children.
