Composition:

Active Ingredient: Ketoconazole (2% w/w)

Pharmaceutical Segment:

Antifungal | Dermatology

Brand Name:

[Your Brand Name]

Therapeutic Indications:

- **Primary Use:** Treatment of fungal and yeast infections of the skin
- **Secondary Benefits:**
 - Helps manage seborrheic dermatitis, dandruff, and pityriasis versicolor
 - Effective against ringworm, athlete's foot, and jock itch
 - Reduces itching, redness, flaking, and irritation
 - Supports daily skin hygiene and prevents reinfection

Product Overview

Ketoconazole (2% w/w) Soap is a medicated antifungal formulation designed to eliminate fungal infections while maintaining skin health. Its active ingredient, Ketoconazole, works by disrupting fungal cell membranes, preventing growth and recurrence.

This soap provides deep cleansing while removing excess oil and impurities, making it suitable for individuals with oily, sensitive, or infection-prone skin. Its dermatologically tested formula supports overall skin protection, making it an essential addition to antifungal treatment regimens.

- Provides broad-spectrum antifungal protection
- Reduces inflammation, redness, and itching
- Maintains skin's natural moisture balance
- Manufactured under WHO GMP-certified standards
