Lefutyle 20

Leflunomide (20mg) Tablets

- Leflunomide holds considerable promise as an anti-rejection drug for use in recipients of corneal transplants in whom cyclosporin-A and steroids are contraindicated.
- Improves both functional ability & physician-based efficacy measures in patients with RA.
- Leflunomide has demonstrated efficacy as a monotherapy in psoriatic arthritis. & also has a beneficial effect in psoriasis.
- Retention on treatment with leflunomide is equal to methotrexate & superior to other DMARDs.
