

Lexoziff™-LT

Eye Drops

Dual Action Formula

Combines Levofloxacin (antibiotic) & Loteprednol (steroid) for effective infection control and inflammation relief.

Broad-Spectrum Antibacterial Protection

Levofloxacin provides powerful coverage against gram-positive & gram-negative bacteria.

Potent Anti-Inflammatory Effect

Loteprednol Etabonate reduces ocular inflammation, redness, and swelling for faster relief.

Ideal for Post-Operative Care

Helps in reducing post-surgical inflammation and prevents bacterial infections.

Effective in Ocular Infections

Indicated in conjunctivitis, keratitis, blepharitis & other anterior segment infections.

Enhanced Safety & Tolerability

Loteprednol has low intraocular pressure (IOP) elevation risk with better safety profile.

Indications

Bacterial
Conjunctivitis

Bacterial
Keratitis

Blepharitis

Post-Operative
Inflammation

Anterior Segment
Infections

Eye Redness &
Irritation
