

Information For the User
Olmesartan medoxomil 40 mg + amlodipine 5 mg tablet

Olmetyle AM 40 Tablet

Brand Name: Olmetyle AM 40 Tablet

Composition:

Each film-coated tablet contains:

Olmesartan Medoxomil IP 40 mg

Amlodipine Besylate IP equivalent to Amlodipine 5 mg

Therapeutic Indication:

Indicated for the treatment of moderate to severe essential hypertension

Used in patients not adequately controlled on monotherapy of either agent

Helps lower blood pressure effectively and reduces the risk of cardiovascular events such as stroke and heart attack

Mechanism of Action:

Olmesartan Medoxomil is an angiotensin II receptor blocker (ARB) that prevents the binding of angiotensin II to AT1 receptors causing vasodilation and reduced aldosterone secretion

Amlodipine is a calcium channel blocker that inhibits calcium influx into vascular smooth muscle causing peripheral vasodilation and decreased peripheral resistance

The combination offers complementary action on the renin-angiotensin system and calcium channels for effective and sustained blood pressure control
