

Information For the User  
Racecadotril 100mg Capsule

# Racedime Capsule

**Composition:**

Each hard gelatin capsule contains:

Racecadotril ..... 100 mg

Excipients ..... q.s.

**Description:**

Racedime Capsule contains Racecadotril, an intestinal antisecretory agent used in the treatment of acute diarrhea. It acts on the enkephalinase enzyme to reduce intestinal hypersecretion of water and electrolytes without affecting intestinal motility, thereby preserving normal bowel function. It provides rapid symptom relief while maintaining gut physiology.

**Indications:**

Acute diarrhea in adults and children above the recommended age  
Adjunct therapy to oral rehydration solution in dehydration  
Supportive treatment to control fluid and electrolyte loss in diarrhea

**Mechanism of Action:**

Racecadotril is a prodrug that converts into thiorphan, an enkephalinase inhibitor. By inhibiting the breakdown of endogenous enkephalins, it reduces cyclic AMP-mediated hypersecretion of water and electrolytes in the intestine, thereby decreasing stool output and preventing dehydration.

**Dosage and Administration:**

Adults: 1 capsule (100 mg) three times daily before main meals or as directed by the physician. Treatment should be continued until two normal stools are observed but not beyond 7 days. To be used alongside oral rehydration therapy if required.

**Side Effects:**

Headache  
Nausea, vomiting  
Abdominal pain  
Skin rash or hypersensitivity (rare)

**Precautions:**

Not to be used in chronic diarrhea or diarrhea associated with antibiotic use without medical advice  
Use with caution in renal or hepatic impairment  
Contraindicated in patients with hypersensitivity to Racecadotril or any component of the formulation  
Not a substitute for oral rehydration solution in dehydration

**Storage:**

Store in a cool, dry place below 25°C. Protect from light and moisture. Keep out of reach of children.

Manufactured in India for:
