

# Rosumore 20

**Composition:**

Each film-coated tablet contains:

Rosuvastatin Calcium I.P. equivalent to Rosuvastatin ..... 20 mg

Excipients ..... q.s.

**Description:**

Rosumore 20 Tablet contains Rosuvastatin, a potent HMG-CoA reductase inhibitor (statin) used to lower elevated cholesterol and triglyceride levels. It helps reduce the risk of atherosclerosis, cardiovascular events, and stroke by decreasing LDL cholesterol, increasing HDL cholesterol, and reducing total cholesterol.

**Indications:**

Primary hypercholesterolemia

Mixed dyslipidemia

Hypertriglyceridemia

Familial homozygous hypercholesterolemia

Prevention of cardiovascular events in high-risk patients

**Mechanism of Action:**

Rosuvastatin selectively inhibits HMG-CoA reductase, the key enzyme in the cholesterol biosynthesis pathway. This reduces hepatic cholesterol production and upregulates LDL receptors, enhancing clearance of LDL cholesterol from the blood.

**Dosage and Administration:**

Adults: Usual starting dose 5–10 mg once daily; can be titrated up to 20 mg or as prescribed by the physician based on lipid profile and patient response.

To be taken with or without food, preferably at the same time each day.

**Side Effects:**

Headache, dizziness

Myalgia, muscle cramps

Abdominal pain, nausea

Rare: Rhabdomyolysis, hepatic enzyme elevation

**Precautions:**

Monitor liver function before and during therapy

Use with caution in patients with renal impairment

Contraindicated in active liver disease or unexplained persistent transaminase elevation

Avoid in pregnancy and lactation

Report unexplained muscle pain or weakness promptly

**Storage:**

Store in a cool, dry place below 25°C. Protect from light and moisture. Keep out of reach of children.
