Generic Name: Tadalafil

Brand Name: Tadafly 20

Manufacturer: [Insert Manufacturer Information, if available]

Strength: 20mg

Tadafly 20 Tablet contains Tadalafil, a well-known medication used for the treatment of:

- Erectile Dysfunction (ED):** Helps men achieve and maintain an erection during sexual activity.
- Benign Prostatic Hyperplasia (BPH):** Eases symptoms such as difficulty in urination or frequent urge to urinate.
- Combination of ED and BPH:** Provides dual benefits for men with both conditions.

Key Features of Tadafly 20

- Drug Class:** Phosphodiesterase-5 (PDE5) Inhibitor.
- Mechanism of Action:** Blocks PDE5 enzyme activity, improving blood flow to specific areas by relaxing smooth muscles in blood vessels.

Indications and Uses

- Erectile Dysfunction (ED):**
 - Enhances erectile function in men when sexually stimulated.
- Benign Prostatic Hyperplasia (BPH):**
 - Reduces symptoms like difficulty starting urination, weak urine stream, and frequent nighttime urination.
- Combination Therapy for ED and BPH:**
 - Addresses both conditions with a single medication.
- Pulmonary Arterial Hypertension (PAH):**

- Higher doses of Tadalafil are prescribed under different brands to treat PAH, but not typically at 20mg for this indication.

Dosage and Administration

- For Erectile Dysfunction (ED):**
 - On-Demand Use:** One Tadafly 20 tablet taken orally at least 30 minutes before sexual activity.
 - Maximum Frequency:** Once daily.
- For Benign Prostatic Hyperplasia (BPH):**
 - A lower dose (5mg daily) is typically recommended. Use 20mg only if directed by a healthcare professional.
- Combination of ED and BPH:**
 - Dose adjusted by the prescribing physician.
- Administration:**
 - Swallow the tablet whole with water.
 - Can be taken with or without food.
