Each film coated tablet contains:

Tadalafil I.P. 10 mg

**Description:**

This combination tablet contains Tadalafil, a phosphodiesterase type 5 (PDE5) inhibitor, and Dapoxetine, a selective serotonin reuptake inhibitor (SSRI). **Dosage & Administration:**

Dosage should be taken as directed by the physician.

Tablet should be swallowed whole with water, preferably 1–3 hours before sexual activity.

**Pharmacological Action:**

Tadalafil inhibits PDE5 in the corpus cavernosum, increasing cyclic GMP levels, leading to smooth muscle relaxation and enhanced blood flow to the penis.

The combination provides dual therapeutic benefits for sexual performance.
