

"When **Hypertension**
Becomes Difficult to Control"

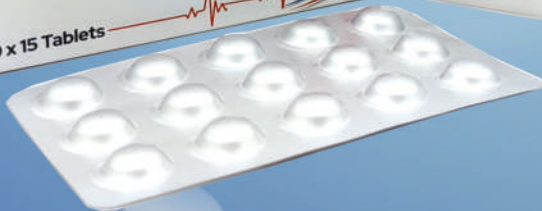

Telbolife™ **AMH** Tablets

Telmisartan (40mg) + Amlodipine (5mg) + Hydrochlorothiazide (12.5mg) Tablets

- Used to manage high blood pressure (hypertension) effectively through a multi-mechanism approach.
- Helps reduce the risk of cardiovascular events such as heart attacks and strokes.
- Controls blood pressure by relaxing blood vessels, reducing fluid retention, and lowering vascular resistance.
- Suitable for patients requiring combination therapy for better blood pressure control when monotherapy is insufficient.
- Supports long-term cardiovascular and renal protection in hypertensive individuals.

Indications:

Hypertension

Cardiovascular risk reduction

Edema associated with hypertension

Resistant hypertension requiring triple therapy
