Description:

Tengroup 20 Tablet contains Teneligliptin, a dipeptidyl peptidase-4 (DPP-4) inhibitor indicated for the management of type 2 diabetes mellitus. It helps in improving glycemic control by enhancing glucose-dependent insulin secretion and suppressing glucagon release, without causing significant hypoglycemia when used as monotherapy.

Indications:

- Type 2 diabetes mellitus
- Patients inadequately controlled with diet and exercise alone or with other antidiabetic agents

It helps in controlling fasting and post-prandial blood glucose levels.

The tablet should be swallowed whole with water and may be taken with or without food.

Regular monitoring of blood glucose levels is recommended.

Pharmacological Action:

Teneligliptin inhibits the DPP-4 enzyme, leading to increased levels of incretin hormones (GLP-1 and GIP). These hormones enhance glucose-dependent insulin secretion and reduce glucagon secretion, thereby improving glycemic control.

- Periodic monitoring of renal function is advised
