

# Tobraxyle D Eye Drop

## Dexamethasone (0.1% w/v) + Tobramycin (0.3% w/v) Eye Drops

**Dexamethasone (0.1% w/v) + Tobramycin (0.3% w/v) Eye Drops** is a powerful combination treatment designed to relieve inflammation and fight bacterial infections in the eye. This eye drop formulation contains **Dexamethasone**, a potent corticosteroid, and **Tobramycin**, an effective antibiotic, to treat a variety of eye conditions caused by inflammation and bacterial infections.

- **Dexamethasone (0.1%):** A corticosteroid that helps reduce inflammation in the eye, relieving symptoms such as redness, swelling, and irritation caused by conditions like conjunctivitis, blepharitis, or post-surgical inflammation. It works by suppressing the immune response, providing relief from discomfort and swelling.
- **Tobramycin (0.3%):** A broad-spectrum antibiotic that targets and eliminates bacterial infections in the eye.
- This combination of anti-inflammatory and antibiotic properties makes it an effective solution for treating eye infections and inflammation, especially those with a bacterial component. These eye drops offer convenient, precise dosing for localized treatment, providing quick relief and helping to restore eye health.

### Key Features:

- **Dual Action Formula:** Combines a corticosteroid for inflammation control and an antibiotic for bacterial infection management.
- **Effective for Eye Infections and Inflammation:** Relieves redness, swelling, irritation, and discomfort caused by bacterial eye infections and inflammatory conditions.
- **Fast Relief:** The active ingredients work together to provide quick symptomatic relief and prevent complications from untreated eye infections.

### Benefits:

- Reduces eye inflammation and discomfort
- Treats bacterial eye infections effectively

- Supports faster healing and reduces the risk of infection spread
- Convenient eye drop format for easy, localized application

### How to Use:

- Shake the bottle well before use.
- Instill the prescribed number of drops directly into the affected eye(s), usually 1-2 drops every 4-6 hours, or as directed by your healthcare provider.
- Avoid touching the tip of the dropper to the eye or any other surface to maintain sterility.

### Important Information:

- Use only as directed by your healthcare provider.
- Do not use if you have a viral or fungal eye infection or have a history of sensitivity to corticosteroids.
- If symptoms persist or worsen, consult a healthcare professional.
- Do not wear contact lenses while using the drops unless advised by your doctor.
- Discontinue use if irritation occurs and consult your doctor.
